PROFILE

Computer Engineer (UAEMéx) focused on Front-End development with React and Vue 3 on TypeScript. I build accessible interfaces with state management (TanStack Query, Zustand, Pinia), Vitest testing and deployment on Vercel and Netlify. I designed the SSV (Service-Store-View) pattern, which separates data access, state and view, and applied it in my degree project.

TECHNICAL SKILLS

Front-End: React 19, Vue 3, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS
State and data: TanStack Query, Zustand, Pinia, Vue Router, REST API consumption
Backend as a service: Supabase (PostgreSQL, Row-Level Security, RPC functions), Firebase (Auth, Storage), SQL
Quality and tooling: Vitest, Testing Library, Git, GitHub, Postman, Vite, Vercel, Netlify
Architecture: SSV, MVC, MVVM, layered architecture, accessibility (ARIA, keyboard navigation)

PROJECTS

Team Agenda — React, TypeScript, Supabase, TanStack Query — Sep 2026 – Oct 2026

Room and equipment booking with role-based access control (owner/admin/member).

- Authorization enforced in the database with PostgreSQL Row-Level Security, not in the UI.
- Automatic role assignment with triggers and member onboarding through RPC functions.
- Data layer with TanStack Query (caching and invalidation) on an SSV architecture in TypeScript.
- 23 Vitest tests; accessibility with ARIA modals and keyboard navigation.

Demo: agend-of-work-usefull-3jmi.vercel.app · Code: github.com/dfntviu/agendOfWork.Usefull

Almanaque del Saber — React 19, TypeScript, Zustand — 2026 – present

Glossary of finance, insurance and civic-law terms for non-specialists, with free exploration, paced learning and text-to-speech.

- Migrated from vanilla JavaScript to React while keeping a layered architecture.
- Global state with Zustand, complex flows with useReducer and the Web Speech API wrapped in a custom hook.
- Custom SVG charts optimized with useMemo and memo to avoid unnecessary re-renders.
- Vitest and Testing Library tests covering search, the state machine and aggregations.

Educational Web Portal — Vue 3, TypeScript, Pinia, Firebase — Degree project · 2024 – 2025

Learning-materials platform: students upload and browse their materials and teachers moderate them.

- SSV architecture: services wrap Firebase (Auth, Storage), Pinia stores are the single source of state and views hold no data logic.
- SPA with Vue Router and role-specific views (teacher and student).

Code: github.com/dfntviu/PortalWEduc3.4

Grade Manager — JavaScript, Chart.js — 2025

Grade CRUD with performance charts, averages and per-group distributions.

EDUCATION

B.Eng. in Computer Engineering — Graduated 2024 · Degree conferred 2026

Autonomous University of the State of Mexico (UAEMéx), School of Engineering — Toluca, Mexico

CERTIFICATIONS (UDEMY)

React: From Zero to Expert · Vue 3: From Zero to Expert · JavaScript: The Complete Hands-On Course · Git + GitHub: A Complete Version Control System · Angular: From Zero to Expert

LANGUAGES

Spanish: native · English: B2+ (technical reading and documentation; professional conversation)
